

# Egghead Tech Tip #3

Egghead Tech Tips was created to save you money by simple steps that you can do in troubleshooting your circuit board.

## Egghead Tech Tip #3

## Fuses and Fuse Holders

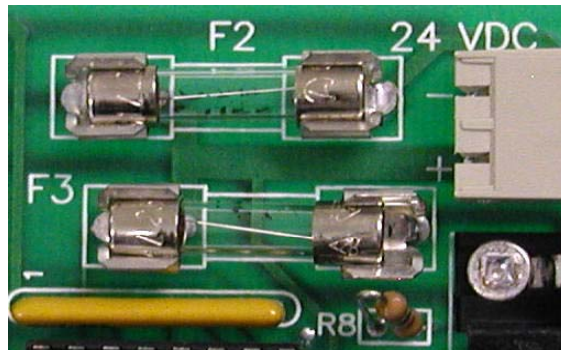

Fuses on the circuit boards are use to protect the circuit board artwork and external wiring. Sometimes I've seen boards come to me defective when the only problem was a blown fuse or the fuse clips have become loose. You can easily fix this.

### Blown Fuse:

Check each fuse for continuity, or sometimes you can physically see if the fuse is blown

### Loose Fuse Clips:

If the fuse is loose, simply remove the fuse and with your fingers, pinch the clips together, but not touching. Replace the fuse and it should be secure.

**A loose fuse will create an intermittent problem, which will drive you nuts.**

If all of the fuses are secure and the board still malfunctions, Egghead Tech Services, Inc. can diagnose the problem with equipment specifically designed to simulate with exact loads.

Repairs performed are warranted for 90 days. Our goal is complete customer satisfaction. We are your servants. Thank you for the opportunity to serve you.

Please send defective circuit board to :

Egghead Tech Services, Inc.  
10051 E. Highland Rd. Ste. 29-388  
Howell, MI 48843-6317
